

Ramtin Karimi

Cybersecurity & Information Assurance

✉ ramtin.karimi01@gmail.com 📍 Jacksonville, FL [🌐 LinkedIn](#) [🔗 Website](#)

EDUCATION & CERTIFICATIONS

Bachelors of Science, Cybersecurity & Information Assurance,

Western Governors University - 4.00 GPA

- Top of the 2025 Cybersecurity Class, Awarded by Program Mentor and Director of Cybersecurity @ WGU
- Invited & Attended the National Cybersecurity Training and Education (NCyTE), the Centers of Academic Excellence in Cybersecurity (CAE-C), and the National Society of Leadership and Success (NSLS)

Certifications

CompTIA A+, Network+, Security+, ITIL v4 Foundation

- Obtaining **CySA+**, **PenTest+**, **SSCP**, and **CCSP**; All will be obtained by Graduation through the program; Expected by June 2026

WORK EXPERIENCE

Security Analyst, S3 Security & WE Surveillance

03/2025 – 01/2026

Jacksonville, FL

- Orchestrated routine incident reports from security operations at 70+ Locations in 5 different municipalities in real-time, ensuring operations are running seamlessly
- Collaborated with Regional Managers, OICs - escalating incidents and documenting detailed reports regarding any critical issues within operations
- Integrated automation using Python, JavaScript to aggregate security logs into a central dashboard & monitor, providing a 75~% reduction in manual review during operation hours.

IT Support Specialist, Mendoza Golden Industries

11/2024 – 02/2025

Jacksonville, FL

- Resolved technical support across hardware, software, and networking issues, resolving 50+ user tickets weekly while maintaining high customer satisfaction.
- Performed system troubleshooting, device imaging, and account administration in Active Directory, ensuring minimal downtime and secure access for all staff.

SKILLS

Security Operations

Splunk, Elastic SIEM, Wazuh, TheHive, Shuffle SOAR, Incident Response, Threat Detection, Log Analysis

Vulnerability & Network Security

Nessus, OpenVAS, Wireshark, NetFlow Analyzer, Vulnerability Management, Network Troubleshooting, Security Assessments

Cloud & Infrastructure

AWS (IAM, EC2, S3, CloudTrail), Terraform, Docker, Kubernetes, Windows, Linux, Active Directory

Compliance Frameworks

NIST CSF, NIST 800-53, NIST 800-171, ISO 27001, CIS Controls, HIPAA, PCI-DSS, Risk Assessments, Control Gap Analysis, Policy Review, Audit Readiness

PROJECTS

Cloud Security Posture Management, Python, AWS, Terraform, Docker, Kubernetes, Boto3, Jinja2

- Developed an automated CSPM tool that scans Infrastructure-as-Code and live AWS environments for security misconfigurations and vulnerabilities across S3, EC2, IAM, Security Groups, and CloudTrail
- Implemented static analysis for Terraform, Dockerfiles, and Kubernetes manifests to support shift-left security practices before deployment
- Built professional HTML reporting with severity scoring, remediation guidance, and compliance alignment to CIS AWS Foundations and NIST 800-53
- Designed modular CLI workflows and demo environments to simulate enterprise cloud audits without requiring production credentials

GRC Threat Modeling Automation, Python, Flask, Pandas, MITRE ATT&CK, NIST CSF, ISO 27001

- Built an automated GRC analysis platform that parses CSV, JSON, and Excel compliance reports to identify control gaps and organizational risk exposure
- Engineered framework mapping across NIST CSF 2.0, ISO 27001, SOC 2, and CIS Controls v8 to streamline governance assessments
- Integrated MITRE ATT&CK correlation to connect compliance weaknesses with adversary tactics and prioritize remediation actions
- Created executive dashboards with maturity scoring, risk posture summaries, and portable desktop deployment for stakeholder reporting

Elastic SIEM, Elasticsearch, Kibana, Beats, Logstash, Kali Linux, Nmap scan

- Set up a virtual environment using Kali Linux, integrating Elastic Agents for seamless log collection and forwarding data to the SIEM, ensuring efficient monitoring of security events
- Configured log parsing, indexing, and visualization pipelines within Elasticsearch and Kibana to support efficient search, correlation, and analysis of security events

SOC Automation Lab, Wazuh, TheHive, Shuffle, Mimikatz, Windows w/ Wazuh Agent, Linux

- Integrated and automated multiple security tools, allowing for efficient, effective detection of network abnormalities, and executing prompt and effective responses to mitigate threats
- Developed automated alert enrichment and response workflows using SOAR playbooks, reducing manual triage effort and accelerating incident response actions

RADAR Vulnerability Scanner, Python, Requests, Nmap, CVE APIs

- Built a custom vulnerability scanner leveraging Python to perform network reconnaissance, service enumeration, and correlation with known CVEs for risk identification
- Enhanced security analysis by automating the collection and interpretation of scan results, supporting faster detection of misconfigurations and potential attack vectors

Computer Vision & Pathfinding Engine, Python, YOLOv11, OpenCV, NumPy, A*, Multi-threading

- Built a real-time detection and automation system using YOLOv11 to identify dynamic entities at 30+ FPS, applying filtering logic to reduce false positives in high-noise environments
- Engineered an autonomous decision engine combining A* pathfinding and a priority-based state machine to adapt to changing conditions and execute actions in real time
- Designed a multi-threaded architecture to support concurrent vision processing, state management, and input control, ensuring low-latency system response
- Developed a SLAM-inspired mapping and monitoring pipeline to reconstruct environments and visualize system performance metrics (FPS, latency)
